Summary

Backend Software Engineer at Amdocs, specializing in high-throughput, low-latency distributed systems. Designed and built event-driven microservices processing millions of Kafka events daily, and led the architecture of a real-time notification service now running in production. Experienced with Kubernetes, CI/CD pipelines, and resiliency patterns. Passionate about building systems that fail gracefully - and rarely do.

Experience

Backend Software Developer | Amdocs - Ra'anana, Israel 2021 – Present

- Developed and maintained high-load **Spring Boot** microservices in production, serving millions of requests daily with sub-100ms p99 latency, horizontal scalability, and fault tolerance.
- Built **Kafka**-based event processing pipelines integrated with **Cassandra**, handling millions of events/day using partition key design, consumer groups, and DLQ-based failure handling.
- Implemented **Resilience4J** fault-tolerance patterns (Retry, Circuit Breaker, RateLimiter, Bulkhead) and distributed tracing with Zipkin/Sleuth - reducing incident response time and improving service observability.
- Designed and optimized RESTful APIs with versioning and backward compatibility, optimized **Oracle/PostgreSQL** queries, achieving up to 40% latency reduction under production load.
- Maintained and improved **GitLab CI / Jenkins / Kubernetes** pipelines - automating build, test, deployment, and rollback for microservices environments.
- Conducted code reviews, refactoring, and owned automated JUnit test suites, collaborated cross-functionally in Agile teams using Jira and Confluence.

Key Projects:

- Real-Time Notification Service:** Architected an event-driven notification system using Kafka + Cassandra, supporting reliable message delivery (99.9%+ delivery rate) with DLQ retry and fault-tolerance patterns in production.
- API Gateway Extension:** Built a Spring Cloud Gateway extension enabling dynamic region-based routing and rule management, improving multi-region routing reliability.
- CI/CD Automation:** Streamlined deployment pipelines using GitLab CI, Docker, and Kubernetes - reducing release cycle time and increasing deployment confidence.

Technical Skills

Languages	Java (Expert), Python (Personal Projects)
Backend	Spring Boot, Spring Cloud (Eureka, Gateway, Config Server), JPA/Hibernate, Feign Clients, REST APIs, OpenAPI/Swagger
Distributed	Apache Kafka, Event-Driven Architecture, Microservices, Resilience4J, Distributed Tracing (Zipkin, Sleuth), Caching
DevOps	Docker, Kubernetes, OpenShift, GitLab CI, Jenkins, Nexus, Bash, YAML
Databases	Cassandra, PostgreSQL, Oracle, MySQL
Practices	Agile/Scrum, Code Reviews, TDD, JUnit, System Design

Education & Military

B.Sc in Computer Science - Sapir Academic College 2018 - 2021 | GPA: 87
Final Project: Machine learning & image processing system in Python - object recognition and classification.
IDF - Combat Soldier, 188th Armored Brigade (2010-2014)

Languages

Hebrew - Native English - Fluent
